

Calibration and Portable Measurement

IMES manufacture a range of calibration and portable weight measurement systems for all types of applications from Module weighing, hydraulic lifting weighing and calibration through to complex C of G calculation systems and Heavy-Lift applications.

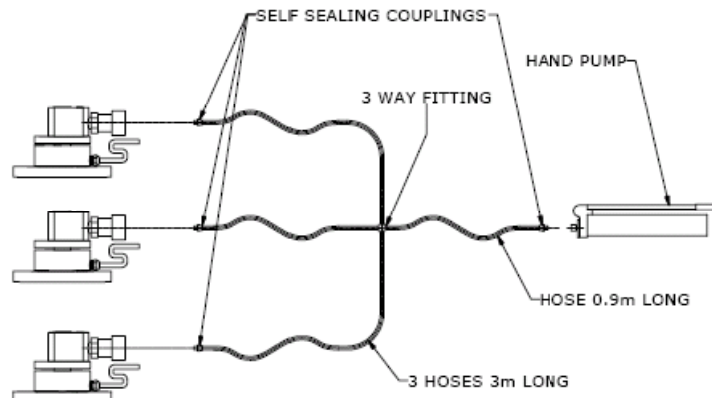

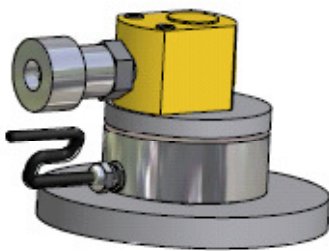

These systems can be static – load applied, dynamic with hydraulic lifting, single or multiple load cell.

All the systems are supplied with calibration certificate from IMES Sheffield based Calibration laboratory which is fully traceable to national standards.

(3 Static Compression cell System)

3 Way Dynamic Hydraulic Calibration System

Options

- Battery powered
- Telemetry based cable less system
- Automatic Centre of Gravity Calculation
- Multiple Load cell System
